Education

KLE Institute of Technology
Bachelor of Engineering (VTU)

Ongoing (2nd Year)

Technical Skills

Languages: C++, JavaScript, TypeScript, Python

Frameworks & Libraries: React, Node.js, Express.js, FastAPI, Flask

Tools & Databases: Git, MongoDB, PostgreSQL

Projects

Amend (*NPM Package, AI Systems, Base64 Engine*)

- Developed an advanced npm error management package designed for AI agents and autonomous systems.
- Integrated a custom Base64 encoding/decoding engine for structured error serialization and transport.
- Engineered support for both predefined and dynamically generated error types with instance-level context tracking.

Proxy-Shield-11 (*Cybersecurity, Blockchain, Threat Detection*)

- Developed a cybersecurity system generating secure proxy credentials with real-time threat monitoring.
- Implemented automated detection of phishing, spam, and anomalous behavior with instant credential rotation.
- Integrated Hyperledger Fabric for immutable logging and secure credential lifecycle management.

MediLedger (*Healthcare AI, Blockchain, NLP, Computer Vision*)

- Designed a decentralized healthcare intelligence system for patient-prioritized data management.
- Integrated AI-powered monitoring with NLP-driven insights and medical image analysis capabilities.
- Leveraged blockchain-based architecture to ensure secure, tamper-proof patient records and data exchange.

Task Manager (AI Enhanced) (*AI Systems, Productivity Automation, Full Stack*)

- Built an intelligent 3-layer productivity system integrating goals, tasks, and daily routine automation.
- Implemented AI-driven prioritization and adaptive scheduling to optimize user productivity flow.
- Designed system behavior to dynamically restructure tasks based on performance and context awareness.

Extracurricular Activities

- Actively participated in 3+ hackathons, collaborating on innovative, high-impact tech solutions under time constraints.
- Member of Codnex Club, a college-based coding and development community, contributing to technical discussions, peer learning, and collaborative projects.
- Proficient in leveraging AI tools and systems to enhance productivity, problem-solving, and development workflows across projects.
